

Name _____

Tiger Connections: Relationships in the Wild

Short Answer Key

1. Scavengers get an easy meal by eating leftover scraps from tiger kills.
2. Tigers help plants by controlling herbivore populations, preventing overgrazing.
3. Parasites like ticks, fleas, and worms can harm tigers.
4. Tigers are apex predators because they are at the top of the food chain and have no natural predators.
5. Tigers indirectly support mutualism by preventing overgrazing, which helps plants and other herbivores thrive.
