

Name _____

The Three Magical Types of Data Analytics

Short Answer Key

1. Descriptive Analytics can be used to summarize monthly sales data for a store.
2. Predictive Analytics uses patterns and trends in historical data to forecast future events.
3. Prescriptive Analytics provides guidance on the best actions to take to achieve specific goals.
4. In healthcare, Descriptive Analytics can summarize patient data, Predictive Analytics can forecast disease outbreaks, and Prescriptive Analytics can suggest treatment plans.
