

Name _____

Exploring the Plant World: Understanding Vascular and Non-Vascular Plants

Short Answer

1. What are the two main types of vascular tissues in vascular plants, and what are their functions?
2. Describe the structure of non-vascular plants and explain how they absorb water and nutrients.
3. Where are vascular plants commonly found, and what are some examples of vascular plant species?
4. How do vascular plants contribute to ecosystem health and functioning?
5. Discuss the ecological significance of non-vascular plants and their role in ecosystems.
