

Name _____

The Magical World of Underwater Photography

Short Answer Key

1. Sunlight in underwater photography creates a play of shadows and rays, enhancing the beauty of the underwater world.
2. Nudibranchs are tiny, colorful sea slugs with intricate patterns and vibrant hues.
3. Underwater photographers use specialized equipment to correct color and lighting issues, ensuring that the true colors of the sea are captured.
4. Some challenges faced by coral reefs include pollution and climate change, which threaten their ecosystems and vibrant marine life.
