## Protists: Nature's Unique Builders

### Multiple Choice Questions

1. What distinguishes protists from bacteria?
  - A) Lack of nucleus
  - B) Eukaryotic nature
  - C) Autotrophic capabilities
  - D) Rigid cell wall
  
2. How do protists differ from fungi in their mode of nutrition?
  - A) They are heterotrophic
  - B) They rely on external food sources
  - C) They produce their own food through photosynthesis
  - D) They lack membrane-bound organelles
  
3. What sets protists apart from animals in terms of reproductive strategies?
  - A) Multicellularity
  - B) Asexual reproduction
  - C) Sexual reproduction
  - D) Complex life cycles
  
4. How do some protists move?
  - A) Extending cell membranes
  - B) Using wings
  - C) Through sexual reproduction
  - D) None of the above
  
5. What distinguishes protists from bacteria in terms of cellular complexity?
  - A) Lack of membrane-bound organelles
  - B) Presence of a true nucleus
  - C) Heterotrophic nutrition
  - D) Rigid cell wall
