## Water Worlds: Urban vs. Rural Clean Water Access

### Multiple Choice Questions

1. What is one factor that often contributes to better clean water access in urban areas?
  - a) Distance to water sources
  - b) Lack of regulations
  - c) Extensive water infrastructure
  - d) Lower awareness about water quality
  
2. Why do rural communities often rely on wells or boreholes for clean water?
  - a) Because they prefer groundwater sources
  - b) Because they have better access to surface water
  - c) Due to limited access to municipal water supply systems
  - d) Because wells are more cost-effective
  
3. How can lack of clean water access in rural areas impact public health?
  - a) By reducing the risk of waterborne diseases
  - b) By increasing child mortality rates
  - c) By improving healthcare access
  - d) By increasing awareness about water quality
  
4. What is one challenge faced by rural residents in collecting clean water?
  - a) Strict water quality regulations
  - b) Short distances to water sources
  - c) Long travel distances to water sources
  - d) Access to advanced water purification technologies
  
5. What is a recommended solution for closing the gap in clean water access between urban and rural areas?
  - a) Reducing regulations in urban areas
  - b) Decreasing awareness about water quality
  - c) Investing in rural water infrastructure development
  - d) Engaging local communities less in decision-making
