

Name _____

Exploring the Variety of Moons in Our Solar System

Short Answer

1. Describe the characteristics of regular moons and provide an example.
2. What are irregular moons, and why do they often have eccentric orbits?
3. Explain the concept of captured moons and provide an example from our solar system.
4. What distinguishes Trojan moons from other types of moons, and where can they be found in relation to a larger moon?
5. Name one moon with a subsurface ocean and describe its significance.
