

Name _____

Unveiling the Mystery: Internet vs. World Wide Web

Short Answer Key

1. The primary purpose of the Internet is to connect devices and enable them to exchange data and information.
2. The World Wide Web was invented by Sir Tim Berners-Lee in 1989 to provide an accessible and user-friendly way to access and share information on the Internet.
3. One component that is part of the Internet but not part of the World Wide Web is routers.
4. One example of something you can do on the World Wide Web that is not related to sending emails or chatting with friends is searching for information on a specific topic using a search engine like Google.
5. The World Wide Web is like a library of digital books and pages where you can read and explore information, while the Internet is like the network of roads that connects different cities (computers) and allows them to communicate.
