

Name _____

The Walking Leaf: Nature's Disguise Expert

Short Answer Key

1. Most walking leaves are 2 to 4 inches long, but some can grow up to 6 inches.
2. The color of a walking leaf helps it blend in with the plants around it, making it harder for predators to spot.
3. Their legs are leaf-shaped, which adds to their disguise and helps them balance on plants.
4. Predators like birds and lizards might try to eat a walking leaf.
5. The patterns on a walking leaf's body make it look like a damaged or eaten leaf, helping it blend in even more.
