

Name _____

A Day in the Life of a Walking Leaf

Short Answer Key

1. Walking leaves are nocturnal to avoid predators that hunt during the day.
2. They stay safe by moving slowly and mimicking the swaying motion of a leaf in the wind.
3. Walking leaves live alone to reduce competition for food and avoid drawing attention to themselves.
4. Male walking leaves use their antennae to find females.
5. After laying her eggs, the female ensures they are in a safe place, and the eggs hatch into the next generation of walking leaves.
