

Name _____

How Does a Walking Leaf Communicate?

Open-Ended Response Answer Key

1. Blending in helps walking leaves avoid predators, as their camouflage makes them look like part of the environment.
2. Pheromones allow walking leaves to find mates despite living solitary lives and being spread out in the wild.
3. Walking leaves might struggle to communicate over long distances if environmental conditions interfere with pheromone signals.
4. The walking leaf's quiet and subtle communication style shows how it relies on camouflage and stealth to survive, rather than bold displays.
