

Name _____

Threats to the Walking Leaf

Open-Ended Response Answer Key

1. Habitat loss removes food sources and hiding spots, making survival harder for walking leaves and other animals in the forest.
2. Climate change disrupts the balance of ecosystems, affecting the plants and conditions that walking leaves need to survive.
3. Young walking leaves are smaller and have less effective camouflage, making them more visible to predators.
4. Humans can help by protecting forests, reducing deforestation, and supporting conservation programs for walking leaves and their habitats.
