

Name _____

Dancing in the Skies: How the Water Cycle Shapes Weather Patterns

Short Answer

1. Explain how evaporation contributes to the formation of areas of low pressure and humid conditions.
2. Describe the role of condensation in cloud formation and its impact on weather patterns.
3. How can different types of precipitation, such as rain and snow, affect daily life and infrastructure?
4. Why is the presence of large bodies of water, like oceans and lakes, significant for nearby weather conditions?
5. How does transpiration from plants contribute to changes in humidity and potential rainfall?
