

Name _____

Where Are You Froggy? - Open-Ended Answer Key

1. Examples include the wood frog's antifreeze and the Australian water-holding frog's cocoon.
2. Habitat changes like pollution or deforestation could threaten frog survival due to their need for moist, clean environments.
3. Frogs absorb substances through their skin, making them good indicators of environmental health.
4. (Student's creative response, likely mentioning environments and adaptations like water retention or cold resistance.)
