

Name _____

The Wild World of Frogs - Short Answers Answer Key

1. Frogs need to keep their skin moist to absorb oxygen and help them breathe.
2. Frogs help control insect populations by eating bugs like mosquitoes and flies.
3. The wood frog can survive being almost completely frozen in winter and "thaws out" in spring.
4. Pollution, climate change, and habitat destruction are major threats to frogs.
5. The bright colors warn predators that poison dart frogs are toxic.
