

Name _____

Wild in Peril: The Impact of Climate Change on Wildlife and Biodiversity

Multiple Choice Questions

1. How does climate change affect the habitats of wildlife?
 - a) It causes habitats to become colder
 - b) It forces species to shift their ranges in search of suitable habitats
 - c) It has no impact on habitats
 - d) It increases the availability of food for wildlife

2. What can disrupt the timing and routes of animal migrations?
 - a) Decreased temperatures
 - b) Increased precipitation
 - c) Warmer winters
 - d) Consistent weather patterns

3. How does climate change impact the breeding success of wildlife?
 - a) It has no effect on breeding success
 - b) It leads to delayed breeding seasons
 - c) It can cause species to breed out of sync with their food sources
 - d) It increases food availability for breeding animals

4. What is a consequence of extreme weather events on wildlife populations?
 - a) Destruction of nesting sites and food supplies
 - b) Increased survival rates
 - c) Improved breeding success
 - d) Enhanced migration patterns

5. How does climate change contribute to the loss of biodiversity?
 - a) By creating more diverse habitats
 - b) By increasing the number of species
 - c) By promoting species conservation efforts
 - d) By reducing habitat availability
