

Name _____

What Do Wolves Eat?

Short Answer Key

1. Wolves hunt animals like deer, elk, moose, and rabbits.
2. Wolves have sharp teeth, strong jaws, long legs, and padded feet that help them hunt effectively.
3. Opportunistic eaters will eat what is available, including small animals or scavenged food, when larger prey is not available.
4. Wolves come into conflict with humans when they hunt livestock.
5. Wolves consume almost every part of their prey, including bones and organs, to get all necessary nutrients.
