

Name _____

Pakistan's Diverse Flora and Fauna: A Natural Wonderland

Short Answer Key

1. The Thar Desert in Pakistan is home to desert-adapted wildlife such as the Indian gazelle, desert fox, and various reptiles. It features thorny shrubs and drought-resistant plants.
2. The Indus River Delta is important for birdlife in Pakistan because it serves as a habitat and feeding ground for migratory birds, including flamingos, pelicans, and herons.
3. The Baluchistan Plateau and Sulaiman Range are important for their rugged terrain and unique wildlife, including the Baluchistan bear, ibex, and caracal. The region's flora includes drought-resistant shrubs and hardy grasses.
4. Climate change poses a threat to Pakistan's ecosystems by disrupting weather patterns, causing extreme weather events, and affecting the availability of water resources, which can impact both plant and animal life.
5. Plants and animals have cultural significance in Pakistan, often featured in local folklore, art, and literature, reflecting the deep connection between people and nature.
