

Name _____

Exploring the World of Amphibians

Open-Ended Response Answer Key

1. Amphibians are adapted to living in both water and land environments through features like permeable skin for breathing, webbed feet for swimming, and legs for moving on land.
2. Pollution can affect amphibians by contaminating their water sources and damaging their sensitive skin.
3. Real-life examples of amphibians impacted by habitat changes include habitat destruction due to human development and climate change altering temperature and precipitation patterns.
4. People can help protect amphibian habitats by reducing pollution, conserving water, and preserving natural habitats.
