## What Does a Worm Look Like?

### Short Answer Key

1. Worms use their segmented bodies and bristles (setae) to grip and move through the soil.
2. Segmented bodies give worms flexibility, helping them contract and expand their muscles to move.
3. Worms sense danger through light and vibrations in their environment.
4. Setae help worms grip the soil, making it easier for them to burrow.
5. Common earthworm colors include brown, pink, and reddish.
