

Name _____

The Daily Life of Worms

Short Answer Key

1. Worms are most active at night to avoid predators that hunt during the day.
2. Worms help plants grow by creating tunnels for air and water to reach roots and enriching the soil with their castings.
3. When worms meet another worm, they exchange sperm to fertilize their eggs.
4. Worms need moist skin to breathe, as they take in oxygen through their skin.
5. Worms help the environment by breaking down organic matter and improving soil health.
