

Name _____

The Wonderful World of Worms

Short Answer Key

1. The tunnels worms create in the soil allow air and water to reach plant roots.
2. Worms need to keep their skin moist because they breathe through their skin.
3. Two types of parasitic worms are tapeworms and roundworms.
4. Earthworms enrich the soil by breaking down organic matter and producing nutrient-rich castings.
5. Worms sense light and vibrations through their skin.
