

Name _____

Stripes in the Wild: All About Zebras

Open-Ended Response Answer Key

1. Scientists might study zebra stripes to understand how they help zebras survive or recognize each other.
2. A zebra's teeth and digestive system help it chew and process tough plants with low nutrients.
3. If zebra habitats were destroyed, zebras would lose their food and shelter, and their population would decline.
4. Living in herds provides zebras with protection from predators and companionship, helping them survive in the wild.
