

Name _____

What is a Capybara Life Cycle Like?

Short Answer Key

1. Capybara pups are born with fur, open eyes, and the ability to walk and swim.
2. Adult capybaras help raise the pups by protecting them and teaching them survival skills.
3. Swimming soon after birth helps capybara pups escape predators.
4. Adult capybaras eat grass and other plants.
5. Capybaras avoid predators by hiding underwater and using their swimming skills.
